Cover Letter

To whom it may concern,

I am a self-taught web developer I have found far more of a drive to learn than in traditional school. With the constant need to find information due to my journey being self-taught the skill of do-diligent research is essential. I am constantly researching and trying to develop the best questions possible so a lesson or a concept on my project will make sense. Trying to be self-taught is not easy but it has taught me to stay in control of my emotions when things get ever stressful, even if the stress is a silly spelling mistake. I've learned learning takes time and patiences and with the right amount the stress becomes just a fun challenge to overcome or something silly to laugh at.

I have completed many relevant projects on my path to start my new career and I will complete many more. With all my projects I learn and comprehend the concepts first then look to apply them to build the project im building. It never goes smooth and i find myself constantly researching whatever language as i get deeper into each project. HTML and CSS are most common across my projects and that's because I learned them first and practiced setting up my pages to make them look nice before adding functionality (most every site i've seen is visually acceptable and ones that aren't are uneasy for me look at). I am advancing my JS skill, and with more functionality i believe my sites would be good for anyone to use and call their site.

I hope my letter finds you well enough to read it and that you got an insight into me. I would love to begin my new career in software development and i am confident will prove an asset to your company. I respectfully send this application for review and request an interview to discuss how I could help you meet your goals.

Sincerely, Jacob Warren

Skills

Programing Languages

- HTML/ 5
- CSS/3
- Java Script

Technologies

- GitHub

Tools

- VS Code

Experiences

Repository

- RockPaperScissors - Designed a simple ui to match a game of Rock Paper Scissors with logic from JS.
- Landing_page, Sign-Up-Form, Admin-dashboard – Implemented responsive design to HTML and CSS built web pages.
- Odin-Recipes – Built a website using only HTML then added minor design with CSS.
- Calculator/ EtchASketch – Developed in Java Script both are styled and are examples of cool things Java Script can accomplish.

Education/ Else

The Odin Project;

I Started my self-taught web development journey with The Odin Projects foundations in June of 2022 and finished 6 months later in December of the same year, the course had us build projects with HTML CSS and Java Script. I am continuing learning with the Odin project after completing foundations. Currently I am learning relational databases and the language of SQL, with SQL Zoo.
