Cover Letter

To whom it may concern,

As a self-taught web developer, I have found far more of a drive to learn than I did in traditional school. With the constant need to find information on my self-taught journey, the skill of do-diligent research is essential. I consistently research and develop the best questions possible, too flow through a lesson or concept on my project that I may or may not fully understand. The self-taught path is not easy but it has taught me many things, too not give up, in or out to the pressures of learning something new and all alone.   I've found learning takes time and patience then the stress can become a fun challenge to overcome or something silly to laugh at later.

I've completed many relevant projects on my path to start my new career and I will complete many more. With all my projects I learn and comprehend the concepts then look to apply them to the project being built. It rarely goes how I in-vision so I'm constantly adapting and researching languages deeper as I delve into each project. HTML and CSS are present in all my projects, I've practiced layout and design for my pages before adding functionality. My JS skill is limited, to a game of RPS against the computer, simple modal boxes and design changes for my CSS. I plan to advance my JS skill past the beginner level and bring new JS projects to my resume.

I hope my letter finds you well enough to read it and that you got an insight into me. I would love to begin my new career in software development and I'm confident I will prove an asset to your company. I respectfully send this application for review and request an interview to discuss how I could help you meet your goals.

Sincerely, Jacob Warren

Skills

<u>Programing Languages</u>

- HTML/ 5
- CSS/3
- Java Script

<u>Technologies</u>

- GitHub

<u>Tools</u>

- VS Code

Experiences

<u>Repository</u>

- RockPaperScissors - Designed a simple ui to match a game of Rock Paper Scissors with logic from JS.
- Landing_page, Sign-Up-Form, Admin-dashboard – Implemented responsive design to HTML and CSS built web pages.
- Odin-Recipes – Built a website using only HTML then added minor design with CSS.
- Calculator/ EtchASketch – Developed in Java Script both are styled and are examples of cool things Java Script can accomplish.

Education/ Else
The Odin Project;

      I Started my self-taught web development journey with The Odin Projects foundations course in June of 2022 and finished 6 months later in December of the same year, the course had us build projects with HTML CSS and Java Script. I am continuing learning with the Odin project after completing foundations. Currently working on the full stack ruby course with aim to complete the Java Script section.
